CELEBRATED SELLY HILL
COLLECTION
OF
ORCHIDS,

Which has been forming for over Thirty Years, by

CHARLES WINN, Esq.,

THE UPLANDS, SELLY HILL, BIRMINGHAM,

WHO IS GIVING UP THE CULTURE OF ORCHIDS.

PURCHASED & OFFERED FOR SALE

MO. BOT. GARDEN
1911

BY

Messrs. Charlesworth & Co.,

HEATON, BRADFORD.

THE COLLECTION

CAN BE VIEWED FROM MONDAY, SEPTEMBER 28th,
AND WILL BE

ON SALE

FROM

MONDAY, OCTOBER 5th, 1896,

And all Orders will be taken in strict rotation.

In sending Orders by Post or Telegram, it will be sufficient
to quote the Number in Catalogue.

TELEGRAPHIC ADDRESS—

“CHARLESWORTH, HEATON, BRADFORD.”

The Selly Hill Collection of Orchids.

We are pleased to be in a position to offer this celebrated collection, which is so well known to all the Orchid world, having been in process of formation for over thirty years.

Mr. WINN has made Orchids his special study, devoting all his leisure time to acquire a thorough practical knowledge of their cultivation and hybridisation in which it is well known he has been eminently successful.

The Plants have been purchased with great discretion as to the varieties, many being bought in flower. When imported Plants have been acquired, only the finest forms and varieties have been kept, Mr. WINN disposing of all that have not reached his high standard of excellence; the same course has been pursued with the Seedlings raised at Selly Hill. **Mr. Winn has specially impressed the above facts upon us.**

Being so well acquainted with this collection, we have purchased it from Mr. WINN on the distinct understanding that we accept all responsibility as to the correct naming of the Plants.

It is well known that Mr. WINN was a lover of all classes of Orchids, perhaps he has most favoured *Cypripediums*, *Cattleyas*, *Dendrobiums*, and *Masdevallias*, the collection being very rich in varieties of the above.

In this Catalogue we are including all **Named** species, varieties, and hybrids; also plants with seeds sown on the pots, which has not yet visibly germinated, and plants carrying seed pods. Great care has been exercised in keeping a record of the sowing and hybridising of the above. The records are in our possession, and will be shown to any purchaser wishing to see them.

This collection being so large and full of interesting detail, we found it advisable to offer the Seedlings (unflowered), also the Plants with Seedlings growing upon the Pots, in a later Catalogue, which will be ready at an early date.

We particularly wish to call attention to the fact that we have carefully considered the value of the Plants, and have priced them at a figure that should ensure a clearance sale.

The entire Collection will be offered, and no Plants will
be parted with till day of Sale.

The Plants are in wonderful condition, being exceptionally clean and vigorous.

EXTRACTS.

MR. JAMES O'BRIEN says in a letter dated July 29th, 1896 :—" I was much pleased with the marvellously good health of the whole of the collection."

The *Orchid Review* describes the collection as follows :—" A fine and very interesting collection of Orchids is the one situated at The Uplands, Selly Hill, Birmingham, the residence of one of our most enthusiastic Orchidists. Here are several well constructed and arranged houses, containing several thousand plants in the most robust health, which we had the pleasure of inspecting a short time ago Mr. Winn spends much time amongst his pets, in fact he describes them as his chief pleasure, and has brought the collection to a condition of excellence which is in the highest degree satisfactory. Hybridisation is carried on extensively in a systematic fashion, at first many difficulties were encountered, but they were gradually overcome, and now Mr. Winn is reaping the reward of his perseverance. Over 2000 Seedlings of various kinds are in existence, to say nothing of those germinating and not yet potted up, in fact one block alone contains over 1200 nice little plants which will probably yield some surprises in the future.

"Several good things have already flowered, our readers will remember the fine *Cymbidium Winnianum*, which was figured at page 361, Vol I., then there is the handsome *Den. x Nestor*, whose portrait appears on a later page, *Cypripedium x Edith Winn*, of which only a single Seedling was raised, *Cyp x Cleopatra*, *Cyp x The Duke*, *Cyp x Ensign*, *Cyp x Psyche*, and one or two others which do not seem to have been recorded. There are also some seedling *Calantles*, *Thunia Veitchiana*, also *Cyp x Calypso*, a particularly fine form.

"Here are some healthy Seedlings raised from *Cyp x Harrisiaum Superbum* crossed with *Cyp Sanderianum*, others raised from *Cyp Rothschildiaum* crossed with *Cyp Niveum* will probably prove good when they reach a flowery stage. Another promising hybrid is *Cyp Niveum* crossed with *x Cœnanthum Superbum* which we may expect to hear of again. An attempt has been made to get an improved white *Selcnepedium*, after the style of *x Cardinali*, by crossing *S x Sedeni Candidulum* with the pollen of a fine *S Schlimi Albiflorum*.

"Turning to *Cattleyas* we find a variety of interesting crosses, amongst them *Cat. Dowiana Aurea x Cat. Warscewiczii*, an experiment made for the express purpose of obtaining the splendid *Cat. x Hardyana*, as we advised in these columns some time ago, Seedlings from *Cat. Bowringiana*, crossed with the old *Cat. Labiata* are promising, both are Autumn bloomers, free growers, and in every way likely to unite well together. Seedlings from *Cymbidium Giganteum* crossed with *C Marstersii*, have reached a good size but not yet flowered.

“These are only a few hasty notes which may serve to give some idea of the work which is being carried on here, and the number of choice crosses which have been made.

“Masdevallias are grown in quantity and the mind naturally reverts to the handsome *M. Winnianum* which originated here, several plants were finely in flower, together with a very dark, almost blackish, form of *M. Roezli*, and another with yellow edged sepals. The forms just mentioned all appeared in the same importation with *M. Winnianum*, and may be considered as extreme forms of this variable species. The handsome *M. Wallisi Stupenda* was also in bloom, its flowers being unusually large, in fact all the *Masdevallias* are well grown, many of the plants being unusually large and strong. Many handsome *Cattleyas* and *Lælias* were in flower, including a very fine *Cat. Mendelli* with the front half of the lip very richly coloured, and the tips of the petals splashed with a similar tint. The beautiful *Cat. Mendelli Morganæ* and a handsome form of *Cat. Mossiæ* with flaked petals, much like *Cat. M. Hardyana*, and a splendid form of *L. C. Schilleriana* was also in bloom.

“The handsome *Den. x Nestor* was bearing a dozen of its richly coloured flowers, a very strong *D. Falconeri Giganteum* with long pseudo bulbs, flowering right to the apex.

“The collection is one of the oldest ones though at the same time one of the most interesting, being well to the front in the comparatively modern work of hybridisation, and Mr. Winn may certainly be congratulated on its excellence.”

194	" "	Shuttryana Var Chamberlainii. Award of Merit, R.H.S., February, 1896. A handsome hybrid, between M. Harryana Cocinea and M. Shuttleworthii. The flower is about intermediate in shape, and the colour is light rose purple, except on the dorsal sepal, which is whitish yellow, veined and suffused near the margin with light rose purple; this organ much resembles Shuttleworthii in shape, and some minute darker spots on the lateral sepals show the influence of the same parent. Grand plant, with 7 leaves	2	2	0

279	"	Crispum.			

For many years Mr. Winn has been purchasing these *Odontoglossums* from time to time in flower, and has only bought good varieties, for which he has paid from 2 to 10 guineas each; some are labelled with descriptions, crosses and otherwise, others are not labelled, or have been labelled, and the labels have been lost, but Mr. Winn informs us that many of those unlabelled are equal to those that are, but, unfortunately, we have to catalogue them without description, as we are desirous of offering the Collection in its entirety, and giving our patrons the chances we might obtain had we kept them until they flowered again.

The following are unlabelled.

1136	" Cattleya Arnoldiana.	A handsome hybrid, between <i>Lælia purpurata</i> x <i>Cat. labiata</i> . The flowers are about intermediate between the two parents. Sepals and petals are of a pleasing rose purple; lip large; front lobe deep rosy purple, veined with deep purple; throat bright yellow, with radiating maroon veins. Grand plant, fine dark variety, 7 extra fine strong bulbs, 6 leaves, 2 very strong leads	31	10	0
1137	" "	Dominiana. A magnificent hybrid, raised probably from <i>Lælia Purpurata</i> x <i>Cat. Dowiana</i> . Flowers are as large as a good <i>Cattleya Mossiæ</i> , and splendidly coloured. Sepals and petals are of a bright rosy purple with dark reticulations. Lip is of an intense and beautiful deep blood purple, this rich dark colour being carried to the margin, showing a little of the gold veinations of <i>C. Dowiana</i> . Good healthy plant, 4 bulbs. all leaved, 1 strong lead	21	0	0

Lot			£	s.	d.

1332 Marginata. A very distinct form of this beautiful striking species, with nearly white dorsal sepal, suffused with light rose at the base and round the margin. A portion of the plant which received the Award of Merit R.H.S.; obtained from the Walton Grange Collection. Small plant, 1 old and 1 young growth		5	5	0
1333	.. Cleola. (Boissierianum x Schlimii Albiflorum) A very handsome hybrid, being nearly white, and graceful in appearance. Fine plant, 2 strong growths, seed sown (Lawrenceanum x Rothschildianum)		1	11	6
1334	.. Cleopatra. (Hookerae x Aënanthum Superbum.) A very minute description of this lovely hybrid can be seen in "Gardeners' Chronicle," 1892, Vol. XI., Page 458. It was raised and flowered by Mr. Winn. In formation of flower it resembles Hookerae, but it has larger flowers, in which the influence of the handsome Aënanthum Superbum is observed, by the lurid glow of the purplish crimson colouring on the upper portion of the dorsal sepal; green radiating lines on the base, which change their hue as they pass the bright purplish crimson of the upper half, which itself gets lighter as it approaches the narrow white margin; petals are greenish at the base, bright purplish crimson at the tips, and on the upper and lower margins are a few chocolate warts. Grand plant (from which descriptions in the 'Gardeners' Chronicle' and "Orehid Review" were taken), with 5 strong growths, 1 flower spike.. ..		4	4	0
1335	.. Same variety. Grand plant, 3 strong growths		2	12	6

Lot.			£	s.	d.
1336	Cypripedium Cleopatra.	(See painting by Macfarlane.) Wonderful variety XXXX. Far superior in every way to the one described above. This variety having flowered later from the same batch of seedlings. Good plant, 1 flowered growth, 2 unflowered growths, pushing flower spike	15	15	0

1378	Cypripedium Fairieano-Lawrenceanum (Fairieannm x Lawrenceanum). A charming hybrid resembling Cyp. Juno. The dorsal sepal is 2½ inches broad by nearly 2 inches long, rather flat, light purple, with light green base and white margin, and closely veined with dark purple. Petals are 2½ inches light purple with paler disc, and light green base, the darker nerves dotted with dark brown. Lip is purple brown in front, paler behind. The staminode is light olive green, with darker reticulations and paler margin. Fine plant, with 4 good growths 12 12 0				
1379	.. Figaro (Spicerianum x Ænanthum Superbum). Fine plant with 3 strong growths and 1 flower bud 2 2 0

1398	"	Harrisander. Award of Merit, R. H. S., July 28th, 1896. Raised in the Collection. Without doubt one of the finest hybrids raised; it is a cross between Cyp. Harrisianum superbum x Cyp. Sanderianum, raised by Mr Winn, and well combines the characters of the two parents; the leaves are marbled as in Harrisianum, and the scape bears three flowers, most like Sanderianum in shape, but with the curved petals broader, and 5 inches long, the colouring being much modified by the influence of the other parent. The dorsal sepal is lined with purple-brown, on a greenish ground; petals spotted with a similar colour, lip veined with purple. Fine plant, with 1 strong growth, 7 leaves...	15	15	0

1405	"	Haynaldianum superbum. Magnificent variety. See painting by Macfarlane. Fine plant, with 3 good growths	2	2	0
1406	"	Harveyanum (Stonci x Lecanum). Very good plant, 6 strong growths seed sown. (Niobe x niveum) ...	4	4	0
1407	"	H. Ballantine (Fairieanum x purpuratum). One of the best hybrids yet raised. The dorsal sepal rather inclines towards C. purpuratum, while the purple longitudinal lines extend almost to the base, as in that species, with the transverse reticulations of C. Fairieanum in addition. The petals also resemble those of the seed parent in shape; the dots of that species extend nearer to the apex in the hybrid, gradually passing into lines, on a light purple ground. The lip also resembles that of the same species, but without the keel. First-class Certificate from the R. H. S. Fine plant, with strong unflowered growth, 5 leaves ...	12	12	0

Lot			£	s.	d.

1892	„ Fytchianum.	Splendid plant with 21 fine bulbs, 6 very strong growths	1	1	0
1893	„ Gemma. (Unique).				
	Described in the "Orchid Review," Vol. III., page 73, as follows: "This, as its name implies, is a charming little gem, a seedling obtained from D. Aureum crossed with the pollen of D. Superbum Huttonii, which has just flowered for the first time in the collection of C. Winn, Esq., Selly Hill, Birmingham. The sepals and petals are ivory white, together with the apex and margin of the lip, while the disc bears a feathered blotch of a peculiar shade of light rosy maroon. The lip is well expanded as in all the hybrids from D. Aureum. The flowers are delightfully fragrant, almost like violets, and at present slightly over 2¼ inches in diameter. The plant is at present very small, the flowering bulb being under 5 inches high, and bearing the same number of flowers. It will evidently be a most beautiful thing when it becomes fully developed." See painting by Macfarlane.
